Java Math Formula Sheet

Math methods

```
Math.pow(double a, double b);
```
Returns the first number raised to the second number.

```
Math.sqrt(double a);
```
Returns the square root of a number.

```
Math.abs(double a);
```
Returns the absolute value of a number

What signs to use for simple operations

```
x + y
```
Addition

```
x − y
```
Subtraction

```
x * y
```
Multiplication

```
x / y
```
Division

** When it says double a or double b, that is any number (integer or decimal). When you type the line, replace "double a" and "double b" with your desired numbers

** x and y are only placeholders for your numbers.
